

A Pet Lover's Guide on Nutrition and Health

By Dr. Alison Rhein, Veterinarian, DVM

Canine Joint Problems - Chapter 1

Your dog is prone to many of the same joint problems as people. A joint injury early in your pet's life is one of the most common reasons for joint pain in later years. But poor nutrition, too little exercise, excessive weight gain and genetics can also compromise your pet's joint health.

If you see any signs such as awkward movements, stiffness, whimpering when getting up or standing, unusual irritability, having difficulty climbing stairs, lagging behind on walks, limping or showing a reluctance to play... they could be the initial warning symptoms that your pet may be experiencing movement difficulties. And with no intervention, over time the joints may become swollen and thickened which can further restrict movement and make normal daily activities very painful.

Be Proactive

Now that you know what to look for, it's equally important that you know what to do if your pet is displaying any of these classic signs. Obviously, if the symptoms persist, you should bring your pet to a veterinarian to see if the signs require special attention. Today, most veterinarians believe in using nutritional supplements to help keep your healthy dog healthy. By being proactive and adding the nutritional support found in the K9 Vitality Joint Support Essentials formula, your pet will get nutrients that target healthy joint function.

Building Blocks

K9 Vitality Joint Support Essentials supplies the nutritional building blocks your dog needs to support healthy collagen, cartilage, bone and lubricating fluid production. In addition, it will nourish, fortify and help your pet's body protect healthy joint function which is so critical to free movement. K9 Vitality Joint Support

Essentials is especially important to large breed dogs because they are much more prone to joint problems.

Healthy Joints and Immune System

K9 Vitality Joint Support Essentials is made with a combination of all natural Perna Canaliculus Glucosamine and Dimethylglycine, which combine to maintain and support healthy joints. Perna Canaliculus, also known as Green-Lipped Mussel, is an edible shellfish found off the shores of New Zealand. Perna Mussel contains Glucosamine, GAGs (a complex of sugar) and a type of omega-3 fatty acid, called ETA Glucosamine is found in the tissues of tendons, ligaments, cartilage and synovial fluid. It stimulates the production of GAGs. GAGs are the main components of synovial fluid and cartilage in joints. It increases the lubrication of the joint and increases water uptake into cartilage, thereby supporting shock absorbency in joints. The omega fatty acids in the Perna support the immune system function, joint health and skin health. K9 Vitality Joint Support Essentials also contains Dimehylglycine, a natural amino acid found in the body which has been shown to help animals maintain a healthy immune system.

Just the Right Combination

As owners, you want to ensure that joint problems and resulting discomfort will occur as rarely as possible. And with K9 Vitality Joint Support Essentials, we are providing the necessary combinations of supplements that will assist your dog's natural rejuvenation mechanisms. In addition, these targeted nutrients will support healthy mobility, flexibility and range of motion.

You owe it to your "best friend" to be proactive and to give them a chance at living a long, healthy and pain-free life.
